

LiquidFiles Secure File Sharing

What is LiquidFiles?

SU users now have a new method for sending and receiving files containing sensitive information including those with PII(Personally Identifying Information) or for sending and receiving files that exceed Outlooks file size limitation. LiquidFiles is a secure file transfer system for person-to-person email communication. Files can be shared securely with users inside or outside of SU's system. LiquidFiles works fast, just as you would expect with standard email.

Who can access it? Access to the <https://secureshare.salisbury.edu> site must be requested and approved. For approval complete a support request online at <https://support.salisbury.edu> by selecting "I Need Access".
